

WELL CHILD VISITS DURING THE COVID-19 PANDEMIC

Staying home keeps you and your children safe, but well child visits and immunizations are essential to long term health and remain a top health priority.

Adapting to Unprecedented Times

Physicians are making adjustments to usual clinic operations to best serve you!

KEEPING PATIENTS SAFE

- Telehealth when possible
- Forms, surveys, and payments handled virtually when possible
- Specific hours and rooms used for well visits and sick visits

VACCINATIONS

- Postponing immunization visits could increase the risk of a vaccine-preventable disease.
- According to CDC guidelines, physicians should prioritize newborn care and vaccination of infants and young children (up to 24 months of age).
