Well Child Visits During the COVID-19 Pandemic

Do Not Delay Care!

We are here for you.

We have changed how we care for children to protect our patients and their families. Call your Doctor’s office as many can offer you a virtual visit by telephone or video. Children two years of age or under should still come in for vaccines and other essential well childcare services to keep them safe and healthy.

**Newborn Visit**

- Weight check
- Feeding concerns
- Jaundice check

**Visits at 2, 4, 6, 9, 12, 15, 18, and 24 months**

- Growing bodies
- Growing brains
- Milestones
- Vaccinations

**Vaccination Details**

- Vaccines protect against 10 diseases which can cause serious illness involving major organs like lungs and brain.
- Many of these diseases may be carried by others at home or in the community without their knowledge.
- To keep you and your child safe, clinics may offer separate times and/or spaces for vaccine-only visits.
- Vaccines can be given safely when your child is sick, as long as temperature is <101°F.

Your child is considered protected if she has received vaccines through 18 months of age if they have followed the AAP recommended vaccine schedules.
